Select Stock in all the leading varieties

50 to 75c. each. \$4.00 per hundred; 4 to 6 ft.

TO OUR CUSTOMERS

We are prepared this season to supply *an unusually fine quality* of trees of the different varieties. Well grown, straight tops, with well developed root systems.

We have exercised every care in the selection of budding and grafting wood, so that we can assure the purchasers of our stock that they will get trees of the variety named.

We recommend careful watering of trees at the time of planting, either by irrigating, or by tanking, and no claims for replacement will be considered unless trees are watered within 48 hours of the time of planting.

Trees should be well heeled in upon receipt from the nursery, using plenty of dirt and thoroughly watered. In planting, the roots should be exposed to the air as little as possible. All root ends should be trimmed with a sharp knife and broken roots removed.

*Prices subject to change
without notice.*

A Few Words About Walnut Varieties

The BLACKMER is from a seedling near Meridian, Sutter County, Cal. It has grown for years under various names, such as Mantner, Meridian,, Westfall, Grimes, Money-maker, Sutter County and probably Woodland Perfection. The nut is fully as good in appearance as the Eureka, which it closely resembles, with plump, light colored meat. The trees come into foliage late enough to escape most late spring frosts; have a dense foliage and the nuts have a very thick hull. This variety will prove very desirable for the interior valley.

The PAYNE is from a seedling tree near Campbell, Santa Clara County, Cal. This is at present one of the most popular varieties. It begins to bear when quite young. The nut is large and somewhat rough, but sells at a price above budded nut prices.

The FRANQUETTE scions that we have used come from one of the most productive walnut groves in the State, and nothing but selected fruit wood was used. This variety is very popular in the interior valleys on account of its resistance to both heat and cold.

The WASSON is a Santa Barbara seedling in Ventura County and has been extensively propagated and planted in Ventura County. Many groves are in full bearing and their production records are inducing many extensive plantings. The nuts are larger, better sealed and rougher than Placentias and sell at premium over No. 1 soft shells.

PRIDE OF VENTURA is from a grove in West Saticoy, Ventura County. It is apparently mixed with a French type. It is a large, smooth, very attractive, well sealed nut and brings a premium over buds and is destined to be the ultimate Fancy variety.

Walnut Varieties--Continued

~~EUREKA~~ is from a seedling grown near Fullerton, Orange County. It is a large, smooth attractive nut. Because it comes into foliage later in the spring it is well adapted to localities subject to late spring frosts. Nuts bring a premium over buds.

The ERHARDT was first propagated in Garden Grove, from a Santa Barbara seedling, supposed to be in Santa Barbara County. It is slightly rougher than Placentia, but is better sealed and more resistant to blight.

The PLACENTIA PERFECTION was a chance seedling in an orchard of Santa Barbara soft shells in Placentia, Orange County. It was first propagated in the early '90s and is the standard with which all other varieties of walnuts are compared.

P E R S I M M O N S

The HACHIYA PERSIMMON is destined to become one of the major fruit crops of California. The average person does not realize its possibilities. It is well worth investigating and a trial planting of a few acres now will undoubtedly result in good profits in the near future.

G R A P E S

A large stock; well rooted; select varieties. Rooted cuttings, each 25c. Per 100, \$10.00.
